ORGANIZATION

Director: R. Balian
Scientific organizers: Marc Chabre, *Grenoble* and Philippe F. Devaux, *Paris*

The Summer School of Les Houches is an institute affiliated with Grenoble University. The 1979 sessions receive support from the Advanced Study Institutes Program of NATO.

The school is intended for young biologists involved in one of the domains treated, and willing to broaden their knowledge and to study the more fundamental aspects; they should have a sound understanding of modern physical and chemical methods. The courses will also interest physicists or chemists wishing to orient themeselves towards this type of biological problem, and who already possess a basic knowledge of molecular biology and biochemistry.

Established in 1951, the school occupies a group of mountain chalets surrounded by meadows and woods, in the French Alps near Chamonix and facing the Mont Blanc. The location offers mountain climbing, hiking and touring opportunities, and is favorable for intellectual work. Accomodation and meals are provided in the school for both participants and lecturers.

APPLICATIONS

Additional information and application forms may be obtained from: *Ecole d'Eté de Physique Théorique, 74310 Les Houches, France, tel. (50) 54 4133* Posters available upon request

DEADLINE

Applications and letters of recommendation must have reached the School by *1 March, 1979.* A session on physical cosmology will take place from 2-28 July, 1979. Two sessions are planned for 1980, one on Defects in Materials, the other on Physics of Laserplasma Interaction.

PUBLICATIONS

Since 1958, the proceedings of the Les Houches Summer School have been published in book form. Retaining the pedagogical and thorough character of the lectures given at the school, the series provides a unique entry into modern physics. In 1975, North-Holland took over the publication, commencing with the XXVIth Session. Recent volumes cover: Frontiers in Laser Spectroscopy, Methods in Field Theory, Particle Physics, Nuclear Physics, and Ill-Condensed Matter.

THE HYDROGEN BOND

Recent Developments in Theory and Experiment

edited by **P. SCHUSTER,** Universität Wien, **G. ZUNDEL,** Universität München and **C. SANDORFY,** Université de Montréal.

1976 1520 pages (in 3 volumes) ISBN 0-7204-0315-4
Price: US $193.75/Dfl. 450.00 per 3-volume set

This excellent three-volume work provides, for the first time, a truly comprehensive survey of the major developments in experimental results and theory of hydrogen bonding. Well-written and thoroughly documented, this up-to-date work by an international group of experts contains a survey not only of the field's existing literature, but of original work being published for the first time as well.

"It has been a privilege and pleasure to review this treatise... I personally found the studies of hydrogen-bonded systems by X-ray and neutron diffraction studies particularly fascinating... Although the distinguished contributors number almost forty and come from different nationalities, these volumes are written in excellent English and overlap between chapters is minimal. The editors must be congratulated ... The volumes are beautifully produced... I was instructed and stimulated by reading these volumes."

NATURE

"This work is bound to become a standard reference for those interested in hydrogen bonding in particular and in molecular association in general."

JOURNAL OF THE AMERICAN CHEMICAL SOCIETY

"Any worker in the field of hydrogen bonding must somehow contrive to gain access to these three volumes."

CHEMISTRY IN BRITAIN

Volume I - Theory

Energy surfaces of hydrogen bonds, calculations of vibrational spectra and proton motions are among the subjects extensively covered in the introduction and 6 chapters that comprise this volume. Model studies on proton correlations, dynamics of proton networks and hydrogen bond statistics are also explored in equal depth.

Volume II - Structure and Spectroscopy

This volume is devoted to the experimental results on structure and stereochemistry of hydrogen bonds in crystals and liquids.

"Articles which seemed to us outstanding are... in Volume II, those by Scandinavian authors (Crystal structures of HB systems, and The hydrated proton) and Hadzi, Bratos, Williams and Blinc (Vibrational and nmr spectroscopy)."

CHEMISTRY IN BRITAIN

Volume III - Dynamics, Thermodynamics and Special Systems

This final volume surveys the experimental results on hydrogen bond dynamics as studied by incoherent neutron scattering, dielectric methods, spin-lattice and chemical relaxation techniques. Particular attention is focused on the results obtained from infrared and NMR spectroscopy.

PHYSICS REPORTS

UPDATED • OCTOBER 1977 •

From the publisher:

Over the past few years, the journal PHYSICS REPORTS (Physics Letters C) has developed into one of the leading review journals for various branches of physics. To date, some 180 review articles have been published.

In the past, the journal was regarded primarily as a "library journal" by virtue of the fact that the publisher was obliged to charge a relatively high price for a single issue, owing to the individual postage, handling and invoicing charges involved.

In order to enable the research worker or graduate student to buy his own copy of a particular REPORT, the following scheme has been devised: North-Holland Publishing Co. is prepared to make single issues of PHYSICS REPORTS available to individuals only at the price of US $4.00, US $5.00 or US $6.00 (depending on the number of pages), providing that combined orders of at least US $50.00 are placed with us, and a cheque for the correct amount is enclosed with the order.

In effect, this means that you and your colleagues may combine your separate orders, as long as the collective order amounts to US $50.00 or more.

INFORMATION TO AUTHORS

Contributions, written in English, should be sent in triplicate preferably to one of the editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case two copies plus the original figures should be sent simultaneously to one of the editors.

All manuscripts will be refereed. They should be typed with double spacing, first copies (or clear Xerox copies thereof), with a wide margin, all pages should be numbered. Before mailing the manuscripts, please check the following points:

1. *Title*: The title should be chosen for its sufficient information content such that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. *Abstract*: The abstract of 100–150 words should contain all the substance of the methods and the results achieved as well as keywords of the paper.
3. *Address*: The name(s) of the author(s) and the name and address of the institute, where the research work was done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
4. *Figures*: The drawings for the figures must be submitted on separate sheets, drawn in black Indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general the figures should be designed for a reduction factor of two to three. Each figure should have a number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Your figure material will be returned after publication of the article.
5. *Formulae*: Displayed formulae should be numbered and typed or clearly written by hand. Vectors will be printed in bold-face italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script.

   Special attention should be paid to characters that can easily be misread, such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap) x, $\times$, X, z, Z, p, P, ρ (Greek rho), etc.
6. *Tables*: Tables should be typed on separate sheets. Each table should have a number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
7. *References*: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

   For a book: A. Messiah, Quantum mechanics, Vol. 1 (North-Holland, Amsterdam, 1970).

   For a paper in a journal: C.J. Winscom and A.H. Maki, Chem. Phys. Letters 12 (1971) 264.

   For a paper in a contributed volume: A. Carrington, in: Magnetic resonance and radiofrequency spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

   For an unpublished paper: G.J. Lycett, Ph.D. Thesis, University of Birmingham, England (1970).
8. *Footnotes*: As far as possible, footnotes should be avoided.
